Laid-Open Publication Date: August 27, 2002

Patent Application No. 2001-042339

Filing Date: February 19, 2001

Applicant: Livedo Corporation

TITLE OF THE INVENTION: Disposable Diaper

[SUBJECT]

A prior disposable diaper having a body portion formed with non-woven fabric or paper is likely to have large ridges (concavities and convexities) on the body fit portion 57 so that the diaper gives hard feeling and has bad appearances due to a silhouette of ridges being visible through an outer trouser etc.. On the other hand, a woven fabric pants hardly forms the silhouette of ridges outside of a trouser etc., but it is expensive. Therefore, the object of this invention is to provide a disposable diaper having a body portion made of non-woven fabric or paper without producing large deep ridges on the body fit portion 57 and without giving hard feeling.

[MEANS TO SOLVE THE SUBJECT]

A disposable diaper 10 is provided at the body fit portion 57 with body portion elastic threads 18 extending in the circumferential direction and sandwiched at 1 - 5 mm intervals between the front side exterior member 14 and the back side exterior member 15. The body fit portion 57 is formed on the whole area thereof with longitudinally extending elongated fine gathers with the pitches of 3 mm or less.
